Zachary Krause - krausez@purdue.edu

Using the MoSCoW method helped our team figure out what Quorum needs to do first and what we can add later if we have time. We put features like trip constraints, a shared itinerary, flight and hotel searches, and an AI chatbot under the must have section because they are central to how we want the app to work. Features like plan voting and conflict flagging would improve the experience, but we agreed they were less important for the first version. We also decided to leave out features like an internal wallet and in-app booking because they would add more work than we can reasonably take on. One thing that this activity allowed us to do is reconsider which aspects we really need and what we can move to different categories. The most useful part was talking about these decisions as a team so we could agree on our priorities and keep the project manageable.

Must
Trip Constraints
↳ Validation (no negs)
Maps integration
Shared Itinerary
Flight/Hotel Search
Login Auth (Google...)
$ Settlement plan
AI chat bot (Claude/Chat)
Should have
Plan Voting
Conflict flagging
Expense history
Low agent response time
Could
Payment integration
Real time sync
Email/Text reminders
Currency Conversion
Light/Dark mode
Won't have
Internal Wallet
In-app booking
Auto booking trips
Visa/Passport guidance
Insurance
